Clinical Radiology Report & Diagnostic Interpretation | Generated: 2026-07-22 13:49:09

|               |               |                      |                     |
|---------------|---------------|----------------------|---------------------|
| Patient ID:   | P-NOR-101     | Patient Name:        | Arthur Pendelton    |
| Age / Gender: | 38 yrs / Male | Scan Modality:       | Chest X-Ray PA View |
| Scan ID:      | SCAN-05933049 | Risk Stratification: | Low Risk            |

PRIMARY AI DIAGNOSIS: NORMAL | Model Confidence: 39.41%

## Visual Evidence & Explainable AI (Grad-CAM)

Left: Original Chest X-Ray | Right: Grad-CAM Feature Attribution Heatmap (Red/Warm indicates focal diagnostic triggers)

## Detailed Radiological Findings & Clinical Impression

RADIOLOGY EVALUATION REPORT (AI-ASSISTED)

PATIENT ID: P-NOR-101 | AGE: 38 | MODALITY: Chest X-Ray PA View

1. CLINICAL IMPRESSION:

Primary Finding: NORMAL  
AI Diagnostic Confidence: 39.41%  
Risk Stratification: Low Risk

2. RADIOLOGICAL FINDINGS:

Both lung fields are clear without focal pulmonary consolidation, interstitial thickening, or pleural effusion. Cardiomedial silhouette is within normal limits for age.

3. EXPLAINABLE AI (Grad-CAM) INTERPRETATION:

Grad-CAM feature attribution shows diffuse uniform background response (coverage 20.41%) without localized pathologic hotspots.

4. RECOMMENDED CLINICAL PLAN:

No active pulmonary disease detected. Routine clinical follow-up as indicated.
